

Mit Kotak

<https://mitkotak.github.io>

Champaign, Illinois, United States

mitkotak0305@gmail.com

Education

Massachusetts Institute of Technology, Cambridge, MA
Computational Science and Engineering

July 2023-Present

University of Illinois at Urbana-Champaign, Champaign, IL

August 2019-May 2023

Bachelor of Science in Engineering Physics (with **Highest Honors**)

Senior Thesis: **Efficient Execution of DG-FEM workloads on GPUs via CUDAGraphs**

Advisor: **Dr. Andreas Klöckner**

Minors: **Computational Science and Engineering, Statistics**

GPA: 3.91/4.0

Dean's List: Fall 2019, Spring 2020, Fall 2020, Spring 2021

Parkland College, Champaign, IL

Summer 2020-Fall 2020

Associate in General Studies

Received: May 2021

GPA: overall 4.0/4.0;

Dean's List: Fall 2020

Publications

What happens when Black Holes collide ?

Mit Kotak, Eric Yu, Jinghan Huang, Jing Zhou, Milton Ruiz, Antonios Tsokaros, Lunan Sun, Stuart L. Shapiro

Coalition for Academic Scientific Computation 2023 Brochure, Page 14

Talks

Optimizing Equivariant Tensor Products (MIT Graphics Seminar 2023)

Optimizing Equivariant Tensor Products (**Sparse Tensor Computation Workshop 2023**)

Efficiently Executing Discontinuous Galerkin Finite-Element (DG-FEM) workloads on GPUs via Data Flow Graphs (**UIUC URS 2023, NCUR 2023**)

Task Graph Parallelism on GPUs via CUDAGraphs (**CEEDS AST Review 2022**)

Posters

Efficiently Executing NumPy on GPUs via the CUDAGraph API (**UIUC URS 2022**)

Analysis of bottle bioassay data: Creating an RShiny app to assist in insecticide resistance monitoring (**Entomology 2023**)

Research Experience

Research Lab for Electronics

July 2023-Present

Dr. Tess Smidt

Working on optimizing tensor product operation in **e3nn framework** through domain specific computing.

Center for Exascale-enabled Scramjet Design

May 2021-May 2023

Dr. Andreas Klöckner

Worked on Efficient execution of array dataflow graphs on GPU hardware.

- **Co-designed and Co-developed a multi-layered framework** with a graduate student for executing data flow graphs on GPUs via an array-based programming interface.

- Extended **PyCUDA**, a python-based GPU scripting language, to provide runtime code generation for NVIDIA's **CUDA**Graph API.
- Implemented a **CUDA**Graph backend for **Pytato**, a lazy-evaluating array interface that lowers *n*-d array programs to computation graphs.
- Developed a **CUDA**Graph backend for **Arraycontext**, an array abstraction for mapping *numpy*-like operations onto **CUDA**Graph driver API calls.

- **Benchmarked a speedup of upto 5x** for Finite-Element based Discontinuous Galerkin Operators.
- **Presented results** at semestrial lab funding reviews (**CEESD AST Review 2022**) and annual undergraduate research symposium (**UIUC URS 2022**).
- **Senior Thesis: Modeling the performance** of **CUDA**Graph API's runtime scheduler through a set of microbenchmarks and writing the paper.

Center for Theoretical Astrophysics

June 2021-June 2023

Dr. Stuart L. Shapiro

Worked on 3D Visualization of Relativistic Magnetohydrodynamics.

- **Led a team of 4 undergraduates** to create 3D visualizations of neutron stars, black hole binaries and black holes disks using a **VisIt-CLI** based software package across 6 supercomputing clusters .
- **Spearheaded** the usage of isosurface shell rendering (5-10 times faster than the conventional volume rendering) for visualizing the density profile.
- **Co-developed a set of Python scripts** for efficiently measuring the circumference of a black hole disk at a given density.
- **Visualizations featured** in 2 *Phys. Rev. Journal* articles, **CASC 2023**, **department news website**, and **NCSA's award winning exhibit at Engineering Open House**.
- **Applied for and received** undergraduate research support grants for summer research (RSG 2022, RSG 2023).

CyberGIS Center for Advanced Digital and Spatial Studies

March 2022-May 2023

Dr. Anand Padmanabhan

Worked on **CyberGIS-Compute**: Geospatial Middleware for Simplifying Access to High-Performance Computing.

- **Provided continued software support** for a *Python*-based GUI and *Typescript*-based *RESTful* API server.
- **Integrated** the *CyberGIS-Compute* framework with **CVMFS** (Cern Virtual Machine File System).

National Center for Supercomputing Applications

August 2022-June 2023

Dr. Antonios Tsokaros

Worked on High Performance Computing for Magnetized Neutron Stars.

- **In progress: Writing** a 100 page primer for 3D visualizations in numerical relativity.

Grants/Awards

2021 Philip J. and Betty M. Anthony Undergraduate Summer Research Award – \$3,000
 2022 Office of Undergraduate Summer Research Support Grant – \$2,000
 2022 1st place in UIUC Image of Research Competition — \$300
 2022 National Center for Supercomputing Applications Student Pushing Innovation (**SPIN**) – \$7,200
 2023 Office of Undergraduate Summer Research Support Grant – \$1,000

Work Experience

College of Veterinary Medicine

January 2023-May 2023

Dr. Becky Smith

- Built an **R shiny** web application for **CDC-funded Midwest Center of Excellence in Vector-Borne Disease** for monitoring pesticide usage which was presented at Entomology 2023.

Office of Undergraduate Research

March 2021-May 2023

Undergraduate Research Ambassador

- Held **one-to-one peer mentoring sessions** with **40+ undergraduates**, **Led** "Getting Started with Research" workshops and helped organize the annual undergraduate research symposium (latest one had 500 presenters).
- **Developed a chatbot** that could answer commonly asked questions regarding finding research opportunities.
